

# Linearity of the core correspondence

Denes Palvolgyi <sup>\*</sup>      Hans Peters <sup>†</sup>      Dries Vermeulen <sup>‡</sup>

## Abstract

It is well known that the core correspondence is linear on the set of convex games. There are however other sets of games where this is true. We use the notion of limit games and a result of Kuipers, Vermeulen and Voorneveld (2010) to characterize the maximal convex sets of balanced TU-games on which the core correspondence is linear.
